Borewells in the Campus

Borewell Borewell usage in our College Campus

Borewells provide a reliable water source for drinking, sanitation, and cleaning purposes in classrooms, hostels, and restrooms. Borewell water is used to maintain green spaces, gardens, and lawns on our campus. Borewell water supports cooking, washing, and other essential activities in our college canteen and hostels. Borewells reduce dependency on municipal water supplies, lowering water expenses. Provides an uninterrupted water source, especially in areas with irregular municipal water supply. Our college becomes more independent in water management, ensuring sustainability. In case of a water crisis, borewells act as a backup water supply. Proper maintenance, periodic water quality checks, and sustainable groundwater usage can ensure long-term benefits from borewells on the college campus.
